

## Experior TDMS Services

Too much old data, storage issues, data inconsistency and slow response times?  
Experior delivers a TDMS Service to resolve these issues

**Benefits:** reduce data volume by up to 80%, provide consistent data, manage sensitive data and speed up response times

**Companies are facing a number of challenges, including; increasing costs of disk space and maintenance SAP®, a number of systems required across multiple projects and accurate data for testing, training and development. Test Data Migration Server (TDMS) was created to solve these expensive and problematic issues and can cut the volume of data in the test environment by up to 80%, reducing infrastructure expenditure whilst improving the quality of the test data and increasing development efficiency.**

### Rationale and Outputs:

There are 3 core elements when determining a Data Strategy - Project Activity, Landscapes & Testing activities. Utilising TDMS to drive Data Strategy, all 3 elements must be considered and support each other. This strategy service provides customers who are either considering the adoption of TDMS or those who have already purchased and are looking for best practice.

### Key Outputs:

- Clear direction on how & where TDMS fits in landscape & projects
- Manage ongoing demand for data
- Identify what & how data is supplied
- Enable people & processes to supply data
- Identify Scrambling requirements
- Provide accurate data for your teams

### Benefits:

- Reduce data sets by up to 60%
- Reduce infrastructure expenditure
- Improve the quality of test data and therefore the quality of software developments
- Enable testing to take place earlier in the process

### Three Core Elements:

#### 1. Project Activity

##### How does data support these activities?

Assess immediate & upcoming work packages e.g.

- BAU
- Upgrades
- Implementations
- Additional functionality
- Patching/Enhancement Pack

#### 2. Landscapes

##### What data is required across each system within the landscape?

- Refresh requirements/rate
- Sensitive information & data scrambling
- Where does TDMS fit? Define process for data refresh

#### 3. Testing

##### What are the data requirements for each phase of testing?

- Volumes required
- Types of data - dependent on test phase
- Test phases e.g. Functional, Technical, Performance & Regression

### Format:

Workshop driven with key team members to build a data strategy utilising TDMS that will support immediate and future requirements.

### Duration:

10-15 days (dependent on size of company, SAP landscape & activity)

### Price:

T&M

### See SAP Differently
