

Experior Performance Testing

Poor performance costs businesses money

Experior delivers a packaged service to validate the performance of SAP solutions within any business

Benefits: mitigate risk, reduce spend on hardware, avoid expensive downtime & exploit unlocked performance potential

With the current market conditions, it has never been more important to ensure that business systems are running efficiently. The cost of systems failure in such times as these could cause lasting damage to a company. Performance for SAP, not only helps your business to mitigate risk, but ensures you are maximising the efficiency of your system and tools on an ongoing basis.

With few businesses immune to the peaks and troughs of demand, consider the significance of performance on supply chain or high volumes of customers ordering directly through your web portal? Success will depend heavily upon the ability of your systems.

Poor performance of critical business processes can lead to devastating effects. If a slow or malfunctioning system threatens monthly 6-figure losses in business and productivity, what figures would you put toward total failure?

Performance Testing by Experior

Developed and delivered by SAP consultants, Performance Testing is a fixed price service to manage the cost of accelerating your SAP solution to the speed of your business demands, through tailored load-testing. Combined with SAP® LoadRunner by HP, Performance for SAP validates system preferences and assesses key metrics of critical business processes. This packaged solution is designed to target your peak demands, specific processes and components e.g. Portals, technical upgrades, or where the volume of users/modifications in your SAP solution increase significantly.

Why Performance Testing?

Performance testing is about 'Mitigating the Risk to the Business':

- Cost impacts to the business due to downtime or poor performance
- Negative impacts on employees
- Bad publicity due to performance problems, especially now more SAP solutions via Portals and other web based applications are external facing and being directly accessed by your customers

Performance testing is becoming more important as the complexity of the SAP landscape grows:

- An increasing number of SAP implementations have I/F to external systems, bespoke code/developments, Portals, Middleware
- System performance can stand up to integrating with different products on complex architectures
- SOA introduces flexibility, agility and the ability to rapidly change business processes

Delivery

Experior delivers rapid, comprehensive results using its proven methodology:

- 6-8 week project engagement
- Installation & configuration of SAP LoadRunner by HP
- Covering up to 20 SAP transactions
- Testing measured against key performance indicators
- Iterative testing, enabling component tuning & optimisation
- Test script library for re-use in subsequent phases
- Can include processes that cover the entire SAP landscape
- Scalable for any number of users*

Fixed Price**

"We were immediately impressed with Experior's approach – they were very knowledgeable about testing tools and SAP, and very receptive to our requirements, our issues and our development path."
