

# Risk Based Process Testing

Experior supported by IDS Scheer

## Risk Based Process Testing | Experior & IDS Scheer

### Why Risk Based Process Testing?

We all know the price of not testing our SAP solution properly. Not enough testing or incorrect testing leads to a solution that does not work. The result is that the business will lose customers, revenue and the confidence of the staff using the solution. Conversely, too much testing, or testing directed into the wrong areas, will result in delays in deployment, also leading to the same consequences.

Either way, too much testing, or too little, you lose.

Risk Based Process Testing from Experior and IDS Scheer solves these problems by targetting your testing effort on what the business needs.

This results in a solution that is deployed on time, taking the burden and pressure off and providing a complete solution – generating business and revenue.

### Risk Based Process Testing

combines an in-depth understanding of business processes, **Experior's** unparalleled SAP® Testing methodology with **IDS Scheer's** market leading **ARIS Business Architect for SAP** and **ARIS Test Scenario Composer**. Underpinned by **SAP Solution Manager** and **SAP Quality Center** by HP.

Starting with mapping business processes and composing and mapping test scenarios, Risk Based Process Testing continues into blueprint and realisation stages, managing risk and overall test management throughout.

### Benefits

Bringing together these best of breed SAP testing tools and market leading services will enable your business to speed up projects, achieve ROI faster, lower costs, reduce TCO and mitigate risk. It will also:

- Speed up blueprint, configuration and final preparation phases
- Achieve a centralised control over your testing
- Eliminate manual tasks

- Have a single point of maintenance
- Reduce time to build new scenarios
- Create reusable & repeatable test assets

**Risk Based Process Testing saves time, money and mitigates risk whilst improving business agility and the quality of your SAP system.**
